# Public Opinion Research Lab 

# JPPHEA CDC Grant ~ Duval County Public Schools Duval County Support for Reproductive and Sexual Health Education and Services in the Public Schools 

## Methodological Statement

The 2022 Reproductive and Sexual Health Education Survey was conducted by the Public Opinion Research Lab (PORL) at the University of North Florida and sponsored by Duval County Public Schools. The final sample consists of a random sample of 605 Duval County residents, aged 18 or older.
A sample of the population (adult Duval County residents) was selected using Random-Digit-Dialing (RDD) methodology for both landlines and cell phones. RDD telephone numbers were provided by Marketing Systems Group (MSG). For individuals answering on a landline telephone, the interviewer asked the first qualified respondent to participate. Cell phone sample respondents were selected by being the first qualified participant to answer the phone. The breakdown of landline to cell phone responses was $17 \%$ to $83 \%$.

Data collection took place at PORL facility with its 27 -station Computer Assisted Telephone Interviewing (CATI) system from November 10 to November 18, 2022. Respondents were contacted by live callers via telephone from 4:00 to 9:00 p.m. daily with up to 3 callbacks. This study had a $7.4 \%$ response rate, using the American Association of Public Opinion Research (AAPOR) Response Rate 3 (RR3) calculations. The overall margin of error for the study is $+/-4.0$ percentage points.
To ensure a representative sample and to adjust for nonresponse bias, all data were weighted to the adult population of Duval County. Data were first weighted to educational attainment for individuals 25 and over, and then to age, sex, and race/ethnicity. Demographic weights were calculated using the U.S. Census Bureau's American Community Survey (ACS) 20205 -year estimates for the adult population of Duval County. Party registration information was obtained from the election authorities in each county. All weighted demographic variables were applied using the SPSS version 27 rake weighting function, which won't assign a weight if one of the weighting demographic variables is missing. Individuals with missing demographic data were manually assigned a weight of 1 .

This survey was directed by Dr. Michael Binder, PORL faculty director and UNF professor of political science. The PORL is a full-service survey research facility that provides tailored research to fulfill each client's individual needs from political economic, social, and cultural projects. The PORL opened in 2001 and is an independent, non-partisan center, a charter member of the American Association for Public Opinion Research (AAPOR) Transparency Initiative and a member of the Association of Academic Survey Research Organizations (AASRO). As members of AAPOR, the PORL's goal is to support sound and ethical practices in the conduct of survey and public opinion research. For more information about PORL, our data, or methodology, visit www.unf.edu/coas/porl or contact porl@unf.edu.

Crosstabulations and Frequencies
Questions below were asked of all respondents, unless otherwise noted

Note: Percentages located in crosstabulations consist of weighted data, while Ns are unweighted totals. See the methodological statement for more about weighting.
