

904WARD Northeast Florida Community Survey 2022

Methodological Statement

The 2022 904ward Northeast Florida Community Survey was conducted by the Public Opinion Research Lab (PORL) at the University of North Florida and sponsored by 904WARD. This study utilized a dual frame, multi-modal design, incorporating both telephone and online surveys.

The population of study is adult residents of Florida, living in Baker, Clay, Duval, Nassau, and St. Johns Counties. Listed sampling frames for the online and telephone studies were provided by CINT and Dynata. The final sample consists of 877 responses completed online, and 236 on the telephone, for a total of 1,113 respondents.

The online survey was administered via Qualtrics between October 13 and Nov 4, 2022. Telephone data collection took place at PORL facility with its 27-station Computer Assisted Telephone Interviewing (CATI) system from October 31 to November 9, 2022. Respondents were contacted by live callers via telephone from 4:00 to 9:00 p.m. daily with up to 4 callbacks. The telephone portion of this study had a 5% response rate, using the American Association of Public Opinion Research (AAPOR) Response Rate 3 (RR3) calculations.

Table 1. County, Sample Size & Margin of Error

Stratum	Sample Size	MoE
Baker	n=106	+/-9.5 pts
Clay	n=203	+/-6.9 pts
Duval	n=399	+/-4.9 pts
Nassau	n=97	+/-10.0 pts
St. Johns	n=308	+/-5.6 pts
Total	n=1,113	+/-2.9 pts

Table 2. County Group, Sample Size & Margin of Error

Stratum	Sample Size	MoE
Duval	n=399	+/-4.9 pts
St. Johns	n=308	+/-5.6 pts
Baker/Clay/Nassau	n=406	+/-4.9 pts
Total	n=1,113	+/-2.9 pts

Table 1 shows the sample sizes and margins of sampling error for each of the five surveyed counties. The overall margin of error for the study is +/- 2.9 percentage points. Please note the margin of error within each county is significantly greater than the total sample. For this reason, the three smaller counties (Baker, Clay, and Nassau) were grouped together to form a larger group for more meaningful comparison. The sample sizes and margins of error for these three geographical groups are listed in Table 2.

To ensure a representative sample and to adjust for nonresponse bias, all data were weighted to the adult populations of Baker, Clay, Duval, Nassau, and St. Johns Counties. Duval and St. Johns Counties were each weighted separately, and Baker, Clay, and Nassau were weighted as a group, due to smaller sample sizes. The weighting process had two steps: each geography was first weighted by educational attainment for individuals

25 and older. Then data were weighted to age, sex, race, party registration, and geography. Demographic weights were calculated using the U.S. Census Bureau's American Community Survey (ACS) 2020 5-year estimates for the adult populations of Baker, Clay, Duval, Nassau, and St. Johns Counties. Party registration information was obtained from the election authorities in each county. All weighted demographic variables were applied using the SPSS version 27 rake weighting function, which won't assign a weight if one of the demographics being weighted is missing. Individuals without a weight were manually assigned a weight of 1.

This survey was directed by Dr. Michael Binder, PORL faculty director and UNF professor of political science. The PORL is a full-service survey research facility that provides tailored research to fulfill each client's individual needs from political economic, social, and cultural projects. The PORL opened in 2001 and is an independent, non-partisan center, a charter member of the American Association for Public Opinion Research (AAPOR) Transparency Initiative and a member of the Association of Academic Survey Research Organizations (AASRO). As members of AAPOR, the PORL's goal is to support sound and ethical practices in the conduct of survey and public opinion research. For more information about PORL, our data, or methodology, visit www.unf.edu/coas/porl or contact porl@unf.edu.
